## **EOS MOVIE plug-in update for Final Cut Pro**

**United Kingdom, Republic of Ireland 26<sup>th</sup> August 2010** – Canon today announces a new plug-in further enhancing quicker and easier editing of EOS MOVIE footage in Apple's software suite, Final Cut Pro. The update will be available to download for free from mid-September.

EOS Movie Plug-in-E1 for Final Cut Pro version 1.1 will add to the recently released Plug-in-E1 by providing support for the Canon EOS 60D, the latest addition to the EOS range. The plug-in will allow users to view metadata and EXIF data for movie files. It will also provide support for multi-core processing, allowing even faster conversions with the latest generation of Macs.

The original plug-in was designed to convert EOS MOVIE footage from Canon's EOS 5D Mark II, EOS 7D and EOS-1D Mark IV Digital SLR cameras to Apple's high-quality ProRes 422 codec at approximately twice the speed of Apple's standard conversion. Users will still have the benefits of being able to add timecode and reel names to footage quickly and easily.
